

Carlos Lopez

Carlos is an information systems engineering student who likes web programming and databases.

It is someone who really likes to learn about technologies, methods, languages or any other type of tool that can be useful to improve their skills and expand their knowledge.

You can highlight his commitment as well as his ease in relating to people, working as a team and, if necessary, being able to lead work teams as long as he has the necessary skills to develop the project he is working on.

Work Experience

Lopez e Hijo SH

December 2018 - Present

June 2022 - January 2023

- UI Design and branding.
 - Used the following technologies HTML, CSS, JavaScript, React and Firebase.
 - A backoffice was created so that the administrator can modify the page
-

⭐ Skills

HTML

The first language to master, in order to create the first website and begin to understand the most basic concepts that every website has.

CSS

To complement HTML, the need arose to learn CSS, in order to be able to develop all the creative and ingenious ideas that one can think of, in order to carry out all the clients' ideas or take them to the next level.

JavaScript

To begin to understand and develop the Back End it was necessary to learn basic things about this enormous language.

Language which I do not master in all its aspects, but which I would like to be able to learn in depth and manage in a much more professional way.

React

Without a doubt, the language that I liked to learn the most because of the ease it offers to reuse code, modify parameters of already established presets and make everything more efficient, from routing to simply visual things.

Python - Django

Currently expanding my knowledge in this language. A course was held in CoderHouse which recognizes the knowledge obtained during the course.
